

Step 10: Safety Rules to Consider

1. Don't store your firearm with a live round in the chamber. Remember a tactical trap is not a safe; and although it's sturdy and well-built, it can be knocked off the wall or broken with enough force.

In the unlikely event of that happening your gun could send a round through your house after being dropped! Yes many new firearms are equipped with a drop safety to prevent this, but this is still something you should consider especially if you live in a home with children. You can take back a lot of things in life but a bullet is not one of them. Please remember that and be responsible when you store your gear.

3. If you have children living in your home it would be a good idea to move your firearms into a locked safe when you are not home or by your Tactical Trap. Most children will not understand how to work the product, but it's better to be safe than sorry. Plus, the whole purpose of a Tactical Trap is for quick access and if you're not home or by the table... it makes no sense to leave your firearm inside of it.

4. Our products are designed to blend in as ordinary pieces of furniture and are strong enough to hold knick-knacks, candles, small vases, etc.... the normal items you might see on an ordinary table.

They are not designed to hold up a TV or anything heavy! Use common sense with decorating your table. If you think an item you want to place on your table might be too heavy... then it probably is. Also, don't store more than 10 lbs of gear inside the table. That's more than enough weight to hold a handgun, spare mag and maybe a small flashlight.

5. Even though it takes around 300lbs of force to pry the table open...it is not intended to serve as a substitute for a government-regulated gun safe. A lock, any lock in the world including a bank vault can fail. Is it likely? No, but neither is lightning striking you, but it can happen. So if you have really young children living or visiting your home... don't allow them to play on the Tactical Table. If you have older children living or visiting the house that you don't want messing around with your guns...take them out of the table when you're not home and lock them in a safe. Use common sense when storing your firearms and you'll be just fine.

Step 11: Troubleshooting

Q: My Tactical Table won't close!
A: No problem, we have a quick fix! Please go to our video page: <http://www.tacticaltraps.com/install> and watch the new video our manager just uploaded titled Tactical Table Won't Shut. The black box inside your table just needs a little bit of an extra 'push' backwards with your thumb for it to line up with the locking mechanism and latch into place. Please let us know if this helps.

Q: My table won't open.
A: You might need to apply slight upward pressure to the bottom to disengage the lock. This is perfectly normal.

Q: Where is the battery backup port located?
A: When standing in front of the table, it is on the RIGHT side of the black box mounted under the table. You can run your hand along side the black box to feel the auxiliary port. It is meant to be discreet so it isn't easy to spot. If you forget to change your lock batteries and your table won't open, insert 4 AAA batteries into the pack and plug it into this port. Then scan the RFID card or use the Bluetooth option to open the table. Once open, immediately change the 4 AAA batteries inside your lock (use alkaline batteries.)

Q: How do I get a part that was missing with my order?
A: Email parts@tacticaltraps.com.

Safety Rules
Troubleshooting

Congratulations on your decision to purchase a Tactical Trap. You've made a wise decision and we're grateful you've given us the opportunity to serve you as a customer.

If you have any questions about your product don't hesitate to contact our support team via email at support@tacticaltraps.com.

Step 1: What's Included?

Included with your Patriot 35s compact should be...

2 Keycards
(in envelope)

LED light
(circle or strip)

Foam pad

Backup battery pack
(Requires 4 AAA
batteries, not included)

If your package is missing any of these items please email us at parts@tacticaltraps.com

Step 2: Assemble the Table

Your Tactical Table has an instruction sheet with illustrations included for quick assembly. Please note we have included a special tool to make it easier for you to attach the legs and bottom base plate of your Tactical Table.

****PLEASE NOTE:** The bits included in this package are NOT for the table. They are extra. You will use the 4mm allen bit that is taped to the front of this toolkit.

Step 3: How The Tactical Table Opens

Please note where the orange sticker dot is on the top of your Tactical Table. This is the trigger point of the lock for manually opening the table. You will take one of the 2 RFID keycards and scan it over this orange sticker dot to open the table.

Step 4: How the Bluetooth Lock Works

Your Tactical Table has been upgraded to our new Bluetooth lock. Included with your table are 2 RFID keycards. You can find those taped to table in a small yellow envelope. (Save the 4-digit pin on the envelope, you'll need this to connect to Bluetooth. This 4 digit PIN is also printed on the face of your lock, which is harder to see.)

1. Update your phone's software if possible.
2. Restart your phone
3. Turn on your Bluetooth
4. Go to the app store if you have an iPhone and search Tactical Traps. If you have an Android go to Google Play and search Tactical Traps. Download and install the app.
5. After you download the app, open it up and click the Bluetooth connect button. Your phone will scan for the lock. When it's found enter your 4-digit pin number.

You can find this number written on top of the envelope your key cards came in. It's also located on the lock face inside your table.

Please double check that Location Services is turned on in your settings, which is required of any Bluetooth device to work, and that all permissions are turned on in the app settings.

6. Click the unlock button after the app is installed and Bluetooth is connected to open your table. Also, you can check your battery voltage and silence the beep by clicking here on the app...

Step 5: Batteries

The RFID lock runs on 4 AAA batteries that should be changed every six or so months, depending on use. To change the batteries simply remove the plate on the RFID and open the unit. Then remove the old batteries and replace with good quality new alkaline batteries.

IMPORTANT: When the lock battery gets low, you will hear a series of beeps when you place the key over the top of the table. When you hear that series of beeps... it's time to change the batteries.

Step 7: LED light

The included LED light is motion detected, meaning there isn't an on and off switch. When the table is closed the light will shut off. When it opens it will turn on by itself.

To mount your light, you will peel and stick either the long magnet (strip light) or the small round sticker (round light) on the top/inside of the table, making sure it's placed away from the lock. Both lights are upgraded versions; we send the style of light based on what our vendor has sent us.

Step 8: Cutting the Foam to Fit Your Accessories

Note: For a video walkthrough go to: tacticaltraps.com/install

Lay the foam insert on the floor. Lay your gear on top. Push down snugly and trace them using a marker. Make sure if you're tracing your firearms that they are unloaded and the chamber is empty!

Next, cut out the foam carefully using a sharp and brand NEW razor/utility knife. It's recommend that you cut through at least 3/4 of the foam for a handgun.

The more time you take to do this correctly, the better your gear will fit. Don't be sloppy with this because the foam is designed to hold your gear in place when the unit lowers. If the cuts are not precise you run the risk of your gear falling out when opening the table.

Step 6: Battery Backup Pack

If for some reason the batteries in your lock die before you change them - no problem! You can always get to your guns by using the battery backup pack that came with your purchase. Here's what you do:

1. Place 4 AAA batteries inside your battery backup pack.
2. Locate the small auxiliary hole on the right side underside of your table (see picture). The port is locate in between the supports - you might need a flashlight to locate it.
3. Plug the backup pack into the hole as tightly as it will fit.
4. Scan one RFID card over the locking mechanism (where the orange dot sticker was) just like you normally would, and your table will open.
5. When your table is open, change your lock batteries.

After you get everything cut out, remove the adhesive backing and carefully place it in your table making sure it's lined up correctly.

Also, keep in mind the more cavities you cut out the less adhesive backing you will have to hold your gear in place. Overloading it is counterproductive; never exceed 15lbs of gear inside. This isn't a storage bin!
